

# Accessing Your WLAN Pi

“How do I get into this thing!?”

- 
- WLAN Pi runs a Armbian, a small scale Debian Linux distribution
  - Image provides a range of linux services and tools
    - Learn more about Linux, shell scripting, Python?
    - You may even like to install some that we haven't included in the distribution (apt-get)
  - Range of tools we've created or installed that you might like/need to access from the OS command line
  - But, how do you get "in" to the WLAN Pi to access the command line goodness?
  - No serial console access, need network connection

- 
- Kit used in this video:
    - NEO2 SBC (Running WLAN Pi image v1.9.1 – “out of the box”, no mods)
    - Comfast CF-912AC wireless adapter

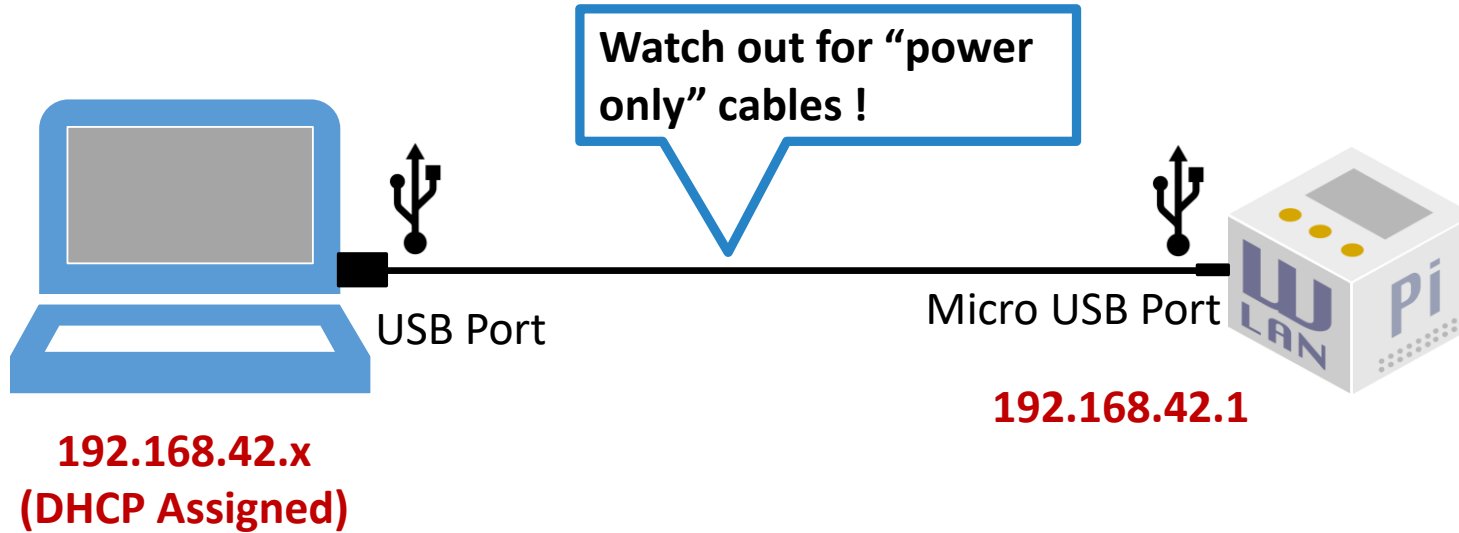

# • WLAN Pi Variations

# #1 – USB/OTG Access

OTG = “On The Go”

Default login credentials:  
User: wlanpi  
Pwd: wlanpi

# #1 – USB/OTG Access (Demo)

# #2 – Ethernet Network Access

Default login credentials:  
User: wlanpi  
Pwd: wlanpi

# #2 – Ethernet Network Access (Demo)

# #3 – Wireless Network Access

**Default login credentials:**  
**User: wlanpi**  
**Pwd: wlanpi**

Requires initial setup using access via another method such as OTG to establish wireless connection.

Edit files:

- `/etc/network/interfaces`
- `/etc/wpa_supplicant/wpa_supplicant.conf`

# #3 – Wireless Network Access (Demo)

# #4 – Hotspot Access

192.168.88.x  
(DHCP Assigned)

Default SSID: wlanpi\_hotspot

WLAN Pi with  
Wireless adapter

192.168.88.1

PSK: wifipros

Default login credentials:  
User: wlanpi  
Pwd: wlanpi

# #4 – Hotspot Access (Demo)

# Summary:

#1 – USB/OTG Access

#2 – Ethernet Network Access

#3 – Wireless Network Access

#4 – Hotspot Access (Demo)
